Stef, here is the link to the calculator - <https://www.nescaum.org/documents/integrated-duty-cycle-test-method-for-cordwood-stoves-1/> Note that there is a glitch for L3 when using oak that we will fix ASAP. The glitch may provide a fuel piece size that makes it impossible to have two pieces. We will be revising the code so that the fuel piece weights are modified to ensure a fuel load with two pieces can be achieved.
